AERO MODELERS ASSOCIATION

ASSOCIATE MEMBER OF AERO CLUB OF INDIA

-2-

AMA RULES

GENERAL

A model aircraft shall be defined as a non-human-carrying aircraft capable of sustained flight in the atmosphere. It may not exceed limitations established in this code and is intended to be used exclusively for sport, recreation, and/or competition. Model aircraft shall be flown only in areas designated by the regional secretary of the area to be eligible for insurance cover.

- 1. I will not willfully fly my model aircraft in a careless or reckless manner, and will abide by this Safety Code and any additional rules specific to flying sites.**
- 2. I will yield the right-of-way to man-carrying aircraft and will see and avoid all aircraft, utilizing a spotter when appropriate.**
3. I will not fly my model aircraft higher than approximately 400 feet above ground level, when within three (3) miles of an airport without notifying the airport operator.
4. The maximum takeoff weight of a model aircraft, including fuel, is 55 pounds.
5. I will not fly my model aircraft in sanctioned events, air shows, or model demonstrations unless **I have previously proven that my aircraft, control system, and piloting skills are adequate by successfully executing all maneuvers intended or anticipated in the specific event. If I am not a proficient pilot, I will not fly in these events unless assisted by an experienced pilot.**
6. I will not fly my model aircraft unless it is identified with my name and address, or AMA number, inside or affixed to the outside of the model aircraft.
7. I will not operate model aircraft with metal-blade propellers.
8. I will not operate model aircraft carrying pyrotechnic devices which explode or burn, or any device, which propels a projectile of any kind.
9. **I will not operate my model aircraft while under the influence of alcohol or while using any drug which could adversely affect my ability to safely control the model**
10. **I understand that third party insurance by AMA is covered only when the model is operated at a designated flying field .**

RADIO CONTROL

- 1. All pilots shall avoid flying models over unprotected people.**
2. I will complete a successful radio equipment ground-range check **in accordance with the manufacturer's recommendations** before the first flight of a new or repaired aircraft.
3. At all flying sites a safety line or lines must be established, in front of which all flying takes place. Only personnel associated with flying the model aircraft are allowed at or in front of the safety line. In the case of air shows or demonstrations a straight safety line must be established. An area away from the safety line must be maintained for spectators. Intentional flying behind the safety line is prohibited.
4. With the exception of events flown under official AMA Competition Regulations rules, excluding takeoff and landing, no powered model may be flown outdoors closer than 25 feet to any individual, except for the pilot and the pilot's helper(s) located at the flight line.
5. Under no circumstances may a pilot or other person touch a model aircraft in flight while it is still under power, except to divert it from striking an individual.
6. Radio-controlled night flying **requires a lighting system that provides the pilot with a clear view of the model's attitude and orientation at all times.**
7. The operator of a radio-controlled model aircraft shall control it during the entire flight, maintaining visual contact without enhancement other than by corrective lenses that are prescribed for the pilot.
